

The Facts About Grout Pumping

1. You can pump Epoxy and Cement Grouts.
2. Pumping generally saves labor. Rule of thumb, 25%.
3. Pumping grout saves time.
4. You need special equipment to do it.
5. You will still need some people to do some work if you pump grout. Just not as many.
6. Distances you can pump are limited based on the product.
Epoxies are very limited.
7. You can rent pumps or pay for a pumping service.
8. Pumping pressure can force grout into areas that head pressure may not.
9. Pumping minimizes the number of trained and experienced grouting personnel needed.
10. Some grout pumping services can save as much as 80% of the labor cost normally used in conventional grouting and help you complete the work in as little as 25% of the time.
